

CLAIMS

1 1. A unit dosage form of a composition which when
2 administered to human beings with intermittent carbohydrate
3 cravings, blocks the craving without necessarily suppressing other
4 food intake, which comprises between about 5 mg and 100 mg per day
5 of an active composition comprising the dextrorotatory optically
6 active isomer of 1- (meta-trifluoromethylphenyl)-2-amino-propane
7 or a physiologically acceptable salt thereof in admixture with an
8 inert non-toxic carrier.

1 2. The compositions of claim 1 wherein the active
2 composition is the dextro isomer of 1-(meta-trifluoromethyl-
3 phenyl)-2-aminopropane.

1 3. The compositions of claim 1 wherein the active
2 composition is the hydrochloric acid addition salt of 1-(meta-
3 trifluoromethylphenyl)-2-aminopropane.

1 4. The pharmaceutical composition of any one of
2 claims 1, 2 or 3 wherein the amount of active composition ranges
3 from 5 to 100 mg.

1 5. A method of treating human patients having the
2 syndrome of abnormal carbohydrate craving, between meals which
3 consists of administering to said patient the composition of
4 claim 1.

1 6. A method of claim 5 wherein the dosage of the
2 active composition in the composition of claim 1 ranges from
3 5 to 100 mg.
